Tajpura Scheme, Lahore Cantt, Pakistan

DevOps Engineer with hands-on internship experience in Linux administration, Docker, Git/GitHub, Bash scripting, and CI/CD workflows. Experienced in containerizing applications, automating server monitoring, and working with deployment and troubleshooting tasks. Familiar with Kubernetes, Terraform, and monitoring tools, with a focus on building reliable, scalable, and automated infrastructure. Aiming to grow in DevOps engineering and progress toward DevSecOps.

WORK EXPERIENCE

PITB - Arfa Software Technology Park	**DevOps Intern** Hands-on experience with Docker, Git/GitHub, Bash scripting, and CI/CD workflows, working on application deployment, containerization, automation, Linux administration, and troubleshooting.	03 - Months
Progree	**DevOps Intern** Worked on Docker containerization, multi-stage Dockerfile configuration, container networking, and automated CI/CD pipelines.	01 - Month

PROJECTS

End-to-End DevOps Automation & Cloud Deployment	**Git | GitHub Actions | Jenkins | Docker | Docker Compose | Terraform | AWS | Prometheus | Grafana** Automated application build and testing using CI/CD pipelines, containerized the application with Docker, provisioned AWS infrastructure using Terraform, and deployed the application on EC2 with monitoring through Prometheus and Grafana.
AWS VPC Infrastructure Setup	**AWS | VPC | Subnets | Route Tables | Internet Gateway | EC2** Planned a custom AWS network environment with VPC, subnet, route table, and internet gateway configuration, with EC2 connectivity testing.
CI/CD Pipeline Automation	**Git | GitHub | GitHub Actions | Jenkins** Configured a GitHub Actions workflow to automate dependency installation and build checks for my portfolio. Integrating Jenkins to practice pipeline automation.
Dockerized Multi-Container Login Application	**Docker | Docker Compose | Flask | MySQL | Nginx | Ubuntu** Built a multi-container login application using Docker Compose, Flask (application logic), MySQL (for User Data) , Nginx (for web server), and Ubuntu (for Docker networking test). Implemented user authentication, Werkzeug password hashing, Docker networking, and persistent database storage.
Linux Server Health Monitoring & Slack Alerts	**Linux | Bash | Cron | Slack Webhooks** Automated server health monitoring using Bash and Cron with CPU threshold detection, process monitoring, and Slack alerts.

EDUCATION

University of Management & Technology, Lahore, Pakistan	**Bachelor's in Cyber Security** Network Security, Ethical Hacking, Digital Forensic	2022 - 2026
Punjab Group of Colleges, Lahore, Pakistan	**ICS** Physics, Mathematics, Computer Science	2020 - 2022

SKILLS

Linux	*Intermediate*	Networking	*Basic*	AWS Cloud	*Basic*
Git & GitHub	*Intermediate*	CI / CD	*Basic*	Python	*Basic*
Docker	*Intermediate*	Prometheus & Grafana	*Basic*	Bash / Shell Scripting	*Basic*
